Objective

The goal of this Data Analysis project using SQL would be to identify opportunities to increase the occupancy rate on low-performing, which can ultimately lead to increased profitability for the airline.

Database from: https://www.kaggle.com/code/prashantverma13/airline-data-analysis-using-sql/input (https://www.kaggle.com/code/prashantverma13/airline-data-analysis-using-sql/input)

Importing Libraries

In [1]:
```
import sqlite3
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
import warnings
warnings.filterwarnings('ignore')
```

Database Connection

In [2]:
```
connection = sqlite3.connect('travel.sqlite')
cursor = connection.cursor()
```

In [3]:
```
cursor.execute("""select name from sqlite_master where type = 'table';""")
print('List of tables present in the database')
table_list = [table[0] for table in cursor.fetchall()]
table_list
```

```
List of tables present in the database
```

Out[3]:
```
['aircrafts_data',
 'airports_data',
 'boarding_passes',
 'bookings',
 'flights',
 'seats',
 'ticket_flights',
 'tickets']
```

Data Exploration

In [4]:
```
aircrafts_data = pd.read_sql_query("select * from aircrafts_data", connection)
aircrafts_data
```

Out[4]:

Basic Analysis

How many planes have more than 100 seats?

In [14]:
```
pd.read_sql_query("""select aircraft_code, count(*) as num_seats
                        from seats
                        group by aircraft_code
                        having num_seats > 100""", connection)
```

Out[14]:

	aircraft_code	num_seats
0	319	116
1	320	140
2	321	170
3	733	130
4	763	222
5	773	402

How the number of tickets booked and total amount earned changed with the time?

In [15]:
```
tickets.dtypes
```

Out[15]:
```
ticket_no       object
book_ref        object
passenger_id    object
dtype: object
```

In [16]:
```
tickets = pd.read_sql_query("""select *
                        from tickets
                        inner join bookings
                        on tickets.book_ref = bookings.book_ref""", connection)

tickets['book_date'] = pd.to_datetime(tickets['book_date'])
```
